Power Unit Support Bracket

Safely secures the power unit to a boat lift leg, canopy leg or the side of your dock, keeping it up and out of your way.

Single Pole Boat Guides

These vertical guides help to direct your boat over the boat lift. They also provide a constant reference point for placement of the boat over the lift, even in waters of fluctuating levels.

Full Length Drive Guides

For the rare instance a customer would prefer not to have the addition of the upright guide poles, we offer the naked full length drive guides, not only center your boat in the worst of conditions, but they are also structural and provide a walking platform and step to access into your boat.

Full Length Drive Guides With Single Pole Uprights

Like pulling into your own bumper boat slip, full length drive guides not only center your boat in the worst of conditions, but they are also structural and provide a walking platform and step to access into your boat. The addition of the upright poles allows every novice a pleasant docking experience.

Bow Stop

If you are less than a professional boat driver, we offer the bow stop. This positioning guide will allow you to stop at the perfect point each time.

Just idle forward until your boat touches the stop and press the up button on the remote. If you have a tennis ball hanging from your garage for your car, this stop is for you.

Bow Stop And Full Length Drive Guides With Single Pole Uprights

This combination of accessories is what we call **“perfect park”**. If anyone less than an experienced boat operator is driving your boat, then this will ensure you have zero stress when ending your day of boating.

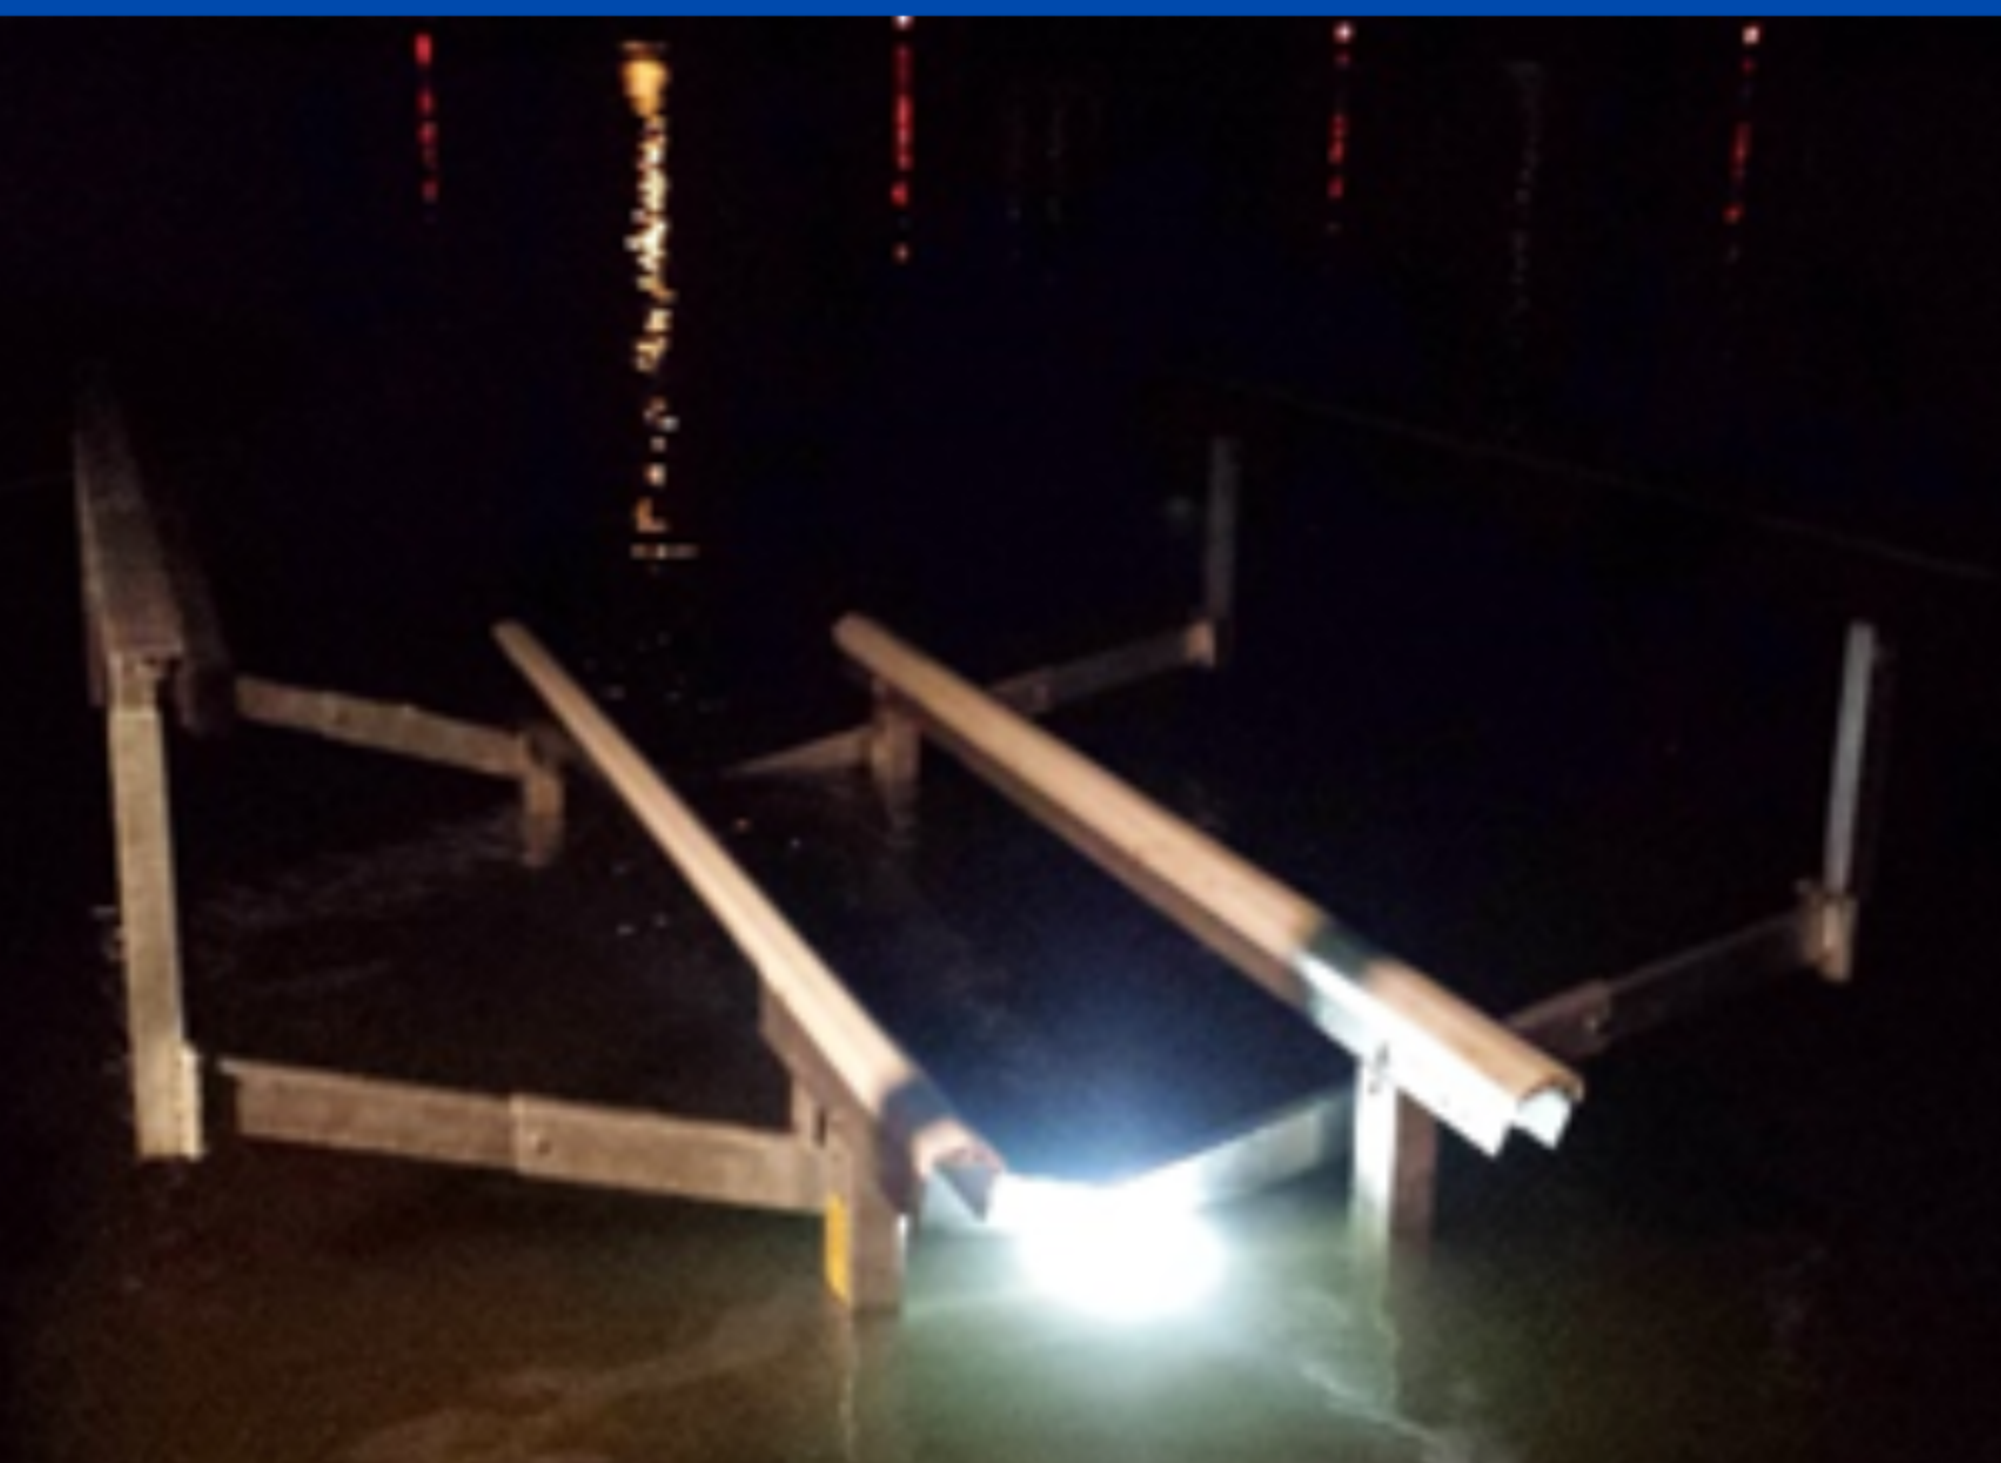

Side Deck and Brackets

One of the many advantages of using a boat lift is increased accessibility to your boat for washing and for attaching your cover. Our sturdy aluminum side deck with flow-thru decking and brackets will help make that chore that much easier. They are designed to attach to the extended boat lift legs or canopy legs and provide a stable walking surface. Use one or two side decks to access your boat with ease.

Underwater LED Remote Lighting

For the late night boater, this light will help guide you home. Our underwater LED has 7 points of light in one housing offering a bright light in the darkest of nights. Coming home in the evening has never been easier.

Standard 12V Hydraulic Pump

Our standard 12 volt hydraulic pump lifts your boat with ease. We use GEM water resistant remote fobs to assure the correct range for ease of use.

HD Dual Battery 12V Hydraulic Pump

Our 12 Volt HD Pump uses twin motors to provide twice the speed of our standard hydraulic pump. We use the same great GEM remote systems to provide flawless operation.
